

A QUICK OVERVIEW OF

The **Speech Assessment and Interactive Learning System** is an app-based tool for presenting children with recordings of other children's speech. The recordings represent children's efforts to perceive difficult sounds, some articulated correctly, some misarticulated. **The child's task is to determine if each auditory stimulus is a correctly articulated variant of the target word.** Four published studies have shown that a **child's rate of progress in speech therapy will be double the usual rate** if the program is included as part of a typical speech therapy program.

USER GUIDE

YOU CAN USE SAILS IN EITHER ASSESSMENT OR TREATMENT MODE

A screenshot of a computer screen displaying the SAILS software interface. At the top, there is a dark header bar with a user icon and the text "Clients' list" on the left, and the name "Mary Andrews" on the right. Below the header is the SAILS logo, which consists of a stylized bar chart above the word "sails". Underneath the logo is a horizontal graphic of colored bars (red, orange, yellow, green, blue) on a grid. Below this graphic, the text "Speech Assessment & Interactive Learning System" is displayed. The main area of the interface is divided into three large, horizontally aligned buttons. The top button is orange and contains the word "ASSESSMENT" in white capital letters. The middle button is light green and contains the word "TREATMENT" in white capital letters. The bottom button is blue and contains the word "RESULTS" in white capital letters.
